

Artem Matushenko

Lead UI Engineer | Technical Delivery & Engineering Planning | Frontend Platform Engineering

Prague, Czech Republic | LinkedIn: <https://linkedin.com/in/artem-matushenko-a0a848116>

Professional Summary

Lead UI Engineer with 12+ years of experience combining deep technical ownership with engineering delivery planning. I plan team composition and hiring needs, drive sprint and roadmap planning, manage scope trade-offs as requirements change, and make prioritisation calls on what's critical versus what can be dropped or delivered in phases—while remaining hands-on and technically accountable for architecture.

I operate at the intersection of engineering, product, and delivery—translating technical strategy into realistic plans, and keeping delivery on track when scope or requirements shift.

Career Highlights

- Planned team composition and headcount needs based on roadmap and delivery requirements, and partnered in hiring through technical interviewing.
- Owned delivery planning across cross-functional initiatives—estimating scope, adapting to changing requirements, and prioritising critical work over droppable or deferrable scope, including partial/phased delivery when needed.
- Coordinated sprint planning, engineering delivery, and day-to-day technical execution while remaining a hands-on engineering contributor.
- Unified 4+ fragmented tech stacks into a single React/TypeScript platform, doubling frontend developer productivity and improving platform stability, onboarding, and support.
- Reduced deployment workflows by over 85% (~4 hours -> <30 minutes) by designing and building a self-service deployment platform.
- Defined frontend engineering standards, implementation patterns, and quality guardrails across multiple teams.
- Led adoption of AI-assisted development, including Claude Code migration and engineering workflow automation.

Delivery & Team Planning

- Planned headcount and team composition (skill mix and seniority) against roadmap and delivery needs.
- Partnered in engineering hiring through technical interviewing.
- Owned delivery estimation and scope planning, adapting priorities as requirements changed mid-flight.
- Made prioritisation calls on critical vs. non-critical scope, including partial and phased delivery when full scope wasn't feasible.
- Coordinated sprint planning and day-to-day engineering delivery across teams.
- Mentored engineers through technical guidance and code review.

Skills

Architecture & Platform

Frontend Architecture • Platform Engineering • Design Systems & Design Tokens • Micro Frontends & Module Federation • Monorepos (Nx)

Frontend Development

React • TypeScript • JavaScript (ESNext) • React Native • Redux • Zustand • TanStack Query • HTML5 • CSS3 • SCSS

Tooling & Quality

Rspack • Webpack • Vite • Storybook • Jest • Cypress • Visual Regression Testing (Percy, Lost Pixel) • GitLab CI • GitHub Actions

Platform & Cloud

REST • GraphQL • AWS • Datadog • Mixpanel

Hiring

Technical Interviewing • Headcount & Team Composition Planning

Professional Experience

Lead Software Engineer – Capillary Technologies | May 2026 – Present

Leading frontend platform evolution following the acquisition of the SessionM business, helping shape engineering direction during a significant organisational transition.

Key Achievements:

- Leading the transformation of a legacy .NET MVC/Razor platform into a modern React/TypeScript microfrontend architecture, consolidating frontend technologies into a single scalable platform and enabling independent product delivery.
- Established frontend engineering standards, implementation patterns, code quality guardrails, and self-review practices that improved consistency, reduced production defects, and increased delivery confidence.
- Designed and developed a self-service deployment platform that unified standalone module releases and navigation management into a single React/Vite application backed by an Express service layer. Reduced deployment and navigation update time by over 85% (~4 hours -> <30 minutes), eliminating repetitive manual workflows and improving developer productivity.
- Led adoption of Claude Code, replacing GitHub Copilot and developing Jira/GitLab workflow automation that reduced manual engineering overhead and accelerated onboarding.
- Contributed to long-term platform strategy supporting the convergence of SessionM and Capillary capabilities into a unified product platform.
- Coordinated sprint planning, engineering delivery, and day-to-day technical execution while remaining a hands-on engineering contributor.

Lead Software Engineer – Mastercard (SessionM) | March 2025 – May 2026

Owned frontend architecture and technical direction for the SessionM customer engagement platform serving global enterprise customers.

Key Achievements:

- Defined frontend architecture across multiple engineering teams, ensuring scalability, consistency, and maintainability.

- Designed and scaled a shared Design System adopted across 5+ product teams, improving UI consistency and accelerating feature delivery.
- Unified 4+ fragmented legacy tech stacks into a single React/TypeScript platform, doubling frontend developer productivity and improving platform stability, onboarding, and support.
- Introduced automated visual regression testing and engineering quality gates, significantly reducing regressions and improving release confidence.
- Improved application performance through architectural optimisation and frontend performance tuning.
- Mentored engineers while establishing frontend engineering practices adopted across multiple teams.

Senior Software Engineer – Mastercard (SessionM) | April 2022 – March 2025

Played a key role in modernising the frontend platform supporting enterprise customer engagement products.

Key Achievements:

- Developed reusable platform components and shared UI libraries adopted across multiple product domains.
- Contributed to the migration from legacy frontend technologies to React and TypeScript.
- Improved frontend architecture, testing practices, and engineering standards.
- Increased engineering efficiency through reusable platform capabilities.

Senior Software Developer – 4finance | August 2019 – April 2022

Key Achievements:

- Led frontend development across multiple FinTech products using React and React Native.
- Migrated legacy applications to modern frontend technologies, improving maintainability and scalability.
- Built reusable UI packages accelerating feature delivery across multiple projects.
- Improved frontend performance and application architecture.
- Mentored engineers through technical guidance and code reviews.

Front-End Developer – 4finance | December 2016 – July 2019

- Developed customer-facing React applications.
- Built reusable frontend components.
- Contributed to frontend architecture improvements.
- Collaborated closely with backend engineers and designers.

Front-End Developer – Turumburum | February 2014 – November 2016

- Developed responsive e-commerce platforms and enterprise websites.
- Mentored junior developers.
- Improved UX and frontend quality across multiple client projects.

Front-End Developer – UpSale | September 2013 – January 2014

- Developed responsive web applications and interactive prototypes.
- Worked closely with designers and backend developers to deliver customer solutions.

Front-End Developer – Freelance (Self-Employed) | March 2013 – September 2013

- Developed responsive UI for websites and CMS templates (Joomla).
- Delivered high-quality HTML/CSS solutions for multiple client websites.

Education

Master's Degree

Kharkiv National University of Radioelectronics

Languages

- English — Professional Working Proficiency
- Ukrainian — Native
- Czech — B1 (Intermediate)
